MSK Kinesis Therapies

We focus on the source: the “Band”

MSK Kinesis Therapy makes it possible to treat, for the first time, the body’s myofascial “Band”.

This is revolutionary because the Band not only holds together the organs and bowels, but is a sophisticated semiconductor system for high intensity piezoelectric energy contained in protein and collagen.

Every bone, muscle, nerve or lymphatic blood vessel is surrounded by a layer of connecting fabric, which is tasked to support and protect these elements.

Today, the new biomechanics insight considers the Band as a fundamental part of the connection tissues action, effecting our muscles, strength, postural, motor and emotional behavioral wellness.

The Bands integrity and elasticity allows the body to maintain a fluid integration between a biomechanics’ request for constant postural adaptation.
